the Earth & Leicestershire and
Rutland Wildlife Trust

Green roofs

Cover a roof with soil and plants and you have a green roof. Do this to a shed, outhouse, garage, small roof extension or office/community building and you will have a wildlife habitat that also provides rainwater management, a cooling energy conservation system and of course something that is great to look at!

The day will include the design, construction and theory of small scale green roofs, and will engage you in new ways of thinking about design! Guaranteed to be inspiring and fun.

There will be a practical workshop to make a mini green roof that you will be able to take home with you.

Trainers

Dusty Gedge: President of the European Federation of Green Roof Associations, Director of livingroofs.org, designer, campaigner and policy instigator of living roofs for biodiversity and urban ecology.

John Little: 15 years designing and installing living roofs, Chelsea Award winner for his pioneering work on urban ecology and estates management at Clapton Park Estate, East London.
